

2012 AP[®] CALCULUS AB FREE-RESPONSE QUESTIONS

CALCULUS AB
SECTION II, Part B

Time—60 minutes

Number of problems—4

No calculator is allowed for these problems.

3. Let f be the continuous function defined on $[-4, 3]$ whose graph, consisting of three line segments and a semicircle centered at the origin, is given above. Let g be the function given by $g(x) = \int_1^x f(t) dt$.
- Find the values of $g(2)$ and $g(-2)$.
 - For each of $g'(-3)$ and $g''(-3)$, find the value or state that it does not exist.
 - Find the x -coordinate of each point at which the graph of g has a horizontal tangent line. For each of these points, determine whether g has a relative minimum, relative maximum, or neither a minimum nor a maximum at the point. Justify your answers.
 - For $-4 < x < 3$, find all values of x for which the graph of g has a point of inflection. Explain your reasoning.
